

DataHaven

Online Backup

Key Features

Automatic Backup -

Backups are set to run at a pre-specified time, be it hourly, daily, weekly, etc.

Lightning fast backups -

After the initial backup has been made, only new or changed files get backed up, ensuring that future backups are lightning fast and it saves your bandwidth.

You may store multiple versions - file versions may be easily stored and accessed for however long you require as long as space permits.

Web-interface for easy management - You are easily able to manage and restore your previous files.

Built in integrity check - to ensure that there are no corruptions or errors.

No maintenance problems for you - DataHaven does not affect your existing infrastructure. It is available for server, Desktop PC, SQL and your virtual machine.

Providing a simple, secure and reliable solution to protect and restore your valuable information.

Fully Automated Functionality

DataHaven Online Backup will eliminate the vulnerability of traditional onsite backup solutions. The system is fully automated and offers scalable storage space making it easy for you to choose a size suitable for your needs.

Your data can be encrypted automatically before upload to a data centre offering 99.9% uptime and availability. This means in event of an emergency your data is available for restoration quickly and easily. Your data is protected simply and effectively.

Instant Backup Schedules

DataHaven offers an easy to use console to manage your backups. You are able to schedule your backups to run at a specific time each day or to run as and when you change files on your computer. This unique feature ensures that if you accidentally overwrite your document, you can instantly retrieve it from the last back up performed, even if you only created the document an hour ago.

Reports & Alerts

You will have a variety of reports at your finger tips through the **DataHaven** console. Quick to view historical reports are on the console dashboard. You can schedule a monthly history report to be automatically emailed to you for your backup management review through the console . Alerts pop up to notify you of backup failures and items requiring your attention.

Easy to Restore

A single file or an entire folder can be easily restored as and when you require it. With multiple version backups you can also choose which version of the document you require.

PRETORIA EYE INSTITUTE

INDUSTRY TYPE: MEDICAL

Business Requirement: Due to an older backup application, new servers that were implemented into the environment were not able to be backed up in the company's conventional manner. A backup method that would be compatible across all of the Windows platforms and also be able to back up Microsoft SQL in an efficient manner was required.

Solution: *Pretoria Eye Institute* selected *IT Technologies* to implement *DataHaven Online Backup* to backup daily SQL dumps as well as folder incremental backups of daily changes. This kept multiple versions available for restore in an offsite location ensuring data protection, not only from fire and theft, but also from accidental deletion.

Results: The *Pretoria Eye Institute's* data is secure with the ability to easily restore data even if the data error is only discovered at a later stage. Multiple versions are kept specifically for this purpose.

CHOC CHILDHOOD CANCER FOUNDATION

INDUSTRY TYPE: NON-PROFIT ORGANISATION

Business requirements: *CHOC* employs various consultants and volunteers, meaning that conventional synchronisation of documents became impossible or obsolete. Computers were then carrying data that was at high risk of being lost, creating a need for a backup system.

Solution: *CHOC* selected *IT Technologies* to implement *DataHaven Online Backup* on all of their computers which backed up to a central location as and when employees were connected to the internet. An automated backup schedule time was set per computer, should the employee not be connected to the internet on the scheduled time, the *DataHaven Software* will initiate a backup when a connection is available.

Result: *CHOC* is able to recover documents from any computer at any time, even in an event of total hardware failure. The process is so simple that the staff would need very little intervention with their backup process. All they need to do is set and forget.

WOODBURN MANN

INDUSTRY TYPE: EXECUTIVE RECRUITMENT

Business Requirement: *Woodburn Mann* had a traditional backup procedure in place, however for compliance and risk management, they needed a backup method that was safe from fire, theft and backup drive failure.

Solution: *Woodburn Man* selected *IT Technologies* to implement *DataHaven Online Backup* to run an automated backup of all databases and documents which stores the information in an offsite cloud location. Weekly reports of backups are supplied to management to be reviewed for compliance purposes.

Result: *Woodburn Mann* has a secure offsite backup system that ensures a high compliance standard that is in accordance with the audit requirements. A satisfactory and supplemental backup method that has been more effective than traditional backup techniques in data recovery in most instances.

“We have DataHaven installed on all our computers. Our documents are backed-up with no effort—automatically.”

- **Adri Ludick**
